

GRANT QUANT

Germantown, MD | (301) 655-5077 | grantquant@gmail.com

EDUCATION

University of Maryland, Global Campus

M.S., Computer Science

Sep 2026 - May 2028

Adelphi, MD

University of Maryland, College Park

B.S., Computer Science

Aug 2021 - May 2026

College Park, MD

- **Achievements:** Honors College: University Honors Program, College of Computer, Mathematical, and Natural Sciences with Honors College
- **Coursework:** Object-Oriented Programming, Computer Systems, Organization of Computer Languages, Discrete Structures, Algorithms & Design, SQL Databases, Compilers, Computer Paradigms, Web Development, Cryptography

WORK EXPERIENCE

Frog Tutoring

Math and Computer Science Tutor

Jun 2025 - Present

Rockville, MD

- Provided personalized tutoring in algebra, geometry, pre-calculus, and introductory Computer Science to middle and high school students via Zoom and in-person sessions, using interactive worksheets and coding exercises, which helped students raise their course grades
- Assessed each student's strengths and weaknesses through diagnostic quizzes, then tailored lesson plans using Python examples and targeted practice on Zoom, reinforcing core concepts and resulting in measurable improvement in homework accuracy
- Guided students to strengthen problem-solving strategies and mathematical intuition with real-world examples and coding challenges, preparing them for school exams and leading to higher test scores and increased confidence

Washington Suburban Sanitary Commission

Cybersecurity Intern

Jun 2024 - Aug 2024

Laurel, MD

- Formulated data validation rules, developed parameterized SQL statements to block injection attacks, and wrote a Content Security Policy that strengthened web security for the utility's applications
- Monitored security alerts from SentinelOne, Varonis, and Mimecast, evaluated each alert's legitimacy, and helped prevent external threats from compromising utility infrastructure
- Analyzed incident statistics to separate true threats from false positives, enabling a more proactive response, and prepared concise report summaries that demonstrated the effectiveness of the selected security platforms

PROJECTS

Rivals Scout | Python, Playwright, OpenCV, Tesseract, Jinja2

- Built an async scouting tool for collegiate Marvel Rivals matches that aggregates opponent player stats (rank, peak rank, hero performance) across tracker.gg and rivalsmeta.com via Playwright browser automation, with automatic fallback between sources for private profiles
- Implemented an OCR ingestion pipeline using OpenCV (Gaussian blur, HSV color-space masking) and Tesseract to extract player names directly from game screenshots or clipboard
- Supported multiple input modes including live clipboard capture, image files, and authenticated league API integrations (NECC, PCL) to pull full team rosters automatically

Password Manager | Ruby

- Designed and implemented a secure password manager supporting command-line and graphical user interface using Ruby and the GTK3 toolkit
- Integrated AES-256 encryption to securely store credentials, with cryptographic keys derived from user-provided master password via SHA-256 hashing, ensuring strong resistance against brute-force attacks.
- Strengthened expertise in Ruby scripted, symmetric encryption, key derivation, and secure local storage.

Ethical Keylogger | C++/Python

- Designed a simple keystroke logger in both C++ and Python that creates a file and logs every keystroke from the user in a responsible and controlled environment.
- Gained much experience working with Windows API, enhancing knowledge of system-level programming and interactions with Windows OS features.

SKILLS

- Java, JavaScript, HTML, C, C++, Python, Ruby, PostgreSQL, MySQL, Eclipse, Linux, Microsoft Office Suite, Google Docs, Google Sheets, Zoom, SentinelOne, MATLAB, OCaml, Rust, Racket, Dafny, Haskell, Liquid Haskell, Varonis, Mimecast, DarkTrace
